

Hybrid Learning in the Classroom

Easily add specialist lessons to your afterschool programmes with O.E.T's Hybrid Learning.

O.E.T's Hybrid Learning Model gives schools affordable access to the world's best teachers while keeping students learning together in the classroom.

Live online expertise is combined with in-class support, collaboration, and peer interaction to deliver outstanding outcomes

What is Hybrid Learning?

Hybrid learning combines the best of both worlds: access to outstanding teachers and the proven benefits of learning together in a classroom. Through OET's hybrid model, schools can connect their students with some of the world's best teachers via live, interactive lessons at a fraction of the cost of traditional private tuition.

Students remain physically in the classroom, working alongside their peers, which preserves the vital social, emotional, and academic benefits of group learning. Discussion, collaboration, and peer interaction are embedded into every lesson, supported by an in-class teaching assistant who ensures students stay engaged and supported.

This approach allows schools to raise academic standards, broaden subject provision, and offer premium teaching expertise without the significant cost and recruitment challenges typically associated with specialist staff.

Model 1 - Hybrid Learning

Model 2 - Enhanced Hybrid Learning

Model 1 - Hybrid Learning

In this model, the teacher delivers a live lesson via Zoom, displayed on the main interactive screen at the front of the classroom. Students follow the lesson together, working with worksheets and notepads at their tables while benefiting from real-time explanation and questioning from the online teacher. An in-class teaching assistant supports learning, facilitates discussion, and helps guide group work, ensuring students remain engaged and supported throughout the lesson.

Teaching assistant for classroom support

Students working in groups

Prepared worksheets and workbooks for students to use during the lesson

Model 2 - Enhanced Hybrid Learning

This model builds on the screen-led approach by providing each student with an iPad or learning device, allowing them to see and hear the teacher individually while still learning together in the classroom. In addition to live instruction, students can access shared documents, interactive resources, and online activities that deepen understanding and encourage active participation. Group work and collaboration remain central, with the teacher setting tasks and the in-class assistant supporting students as they work together both offline and online.
